

SEMAYOT CREATIVE BRIEF FOR DESIGNER & DEVELOPER v1

1. Project Objective

Membangun website publik dan internal admin system untuk Rumah Makan Semayot.

Website publik harus menjadi brand experience yang ceria, bersih, animated, dan memorable. Internal admin system harus menjadi alat operasional untuk mengelola produk, transaksi, pendapatan, pengeluaran, laporan pembukuan, dan AI business summary.

2. Product Vision

Semayot bukan hanya punya website profil. Semayot harus punya digital operating system sederhana:

- Public website untuk pelanggan
- Admin dashboard untuk owner/kasir
- Pembukuan otomatis
- Laporan harian/bulanan
- Agent summary untuk insight bisnis
- Market radar untuk rekomendasi kompetitif

3. Target Audience

Public Website

1. Pelanggan lokal yang ingin melihat menu dan lokasi
2. Pelanggan baru yang menemukan Semayot dari Google/social media
3. Pelanggan loyal yang ingin order cepat
4. Keluarga atau grup yang ingin makan bersama

Admin System

1. Owner rumah makan
2. Kasir/admin
3. Staff yang mengelola menu atau laporan
4. AI agent sebagai pembaca data dan pembuat summary, bukan pengubah data

4. Design Direction

Public Website

Kesan utama:

- Happy service
- Cute mascot
- Food-first
- Clean and warm
- Motion-rich but lightweight
- Friendly and modern

Admin System

Kesan utama:

- Rapi
- Cepat
- Serius
- Mudah dipakai
- Tidak ramai
- Tidak terlalu banyak animasi
- Fokus pada angka dan tindakan

Public website boleh playful. Admin system harus efficient.

5. Mascot Requirement

Buat maskot babi yang:

- Lucu
- Bersih
- Gemes
- Ramah
- Rounded
- Modern vector style
- Mudah dianimasikan
- Bisa dipakai sebagai SVG/Lottie/PNG
- Bisa memiliki beberapa pose

Required Mascot Assets

1. Mascot waving
2. Mascot holding menu
3. Mascot pointing to food
4. Mascot carrying tray

5. Mascot thank you
6. Mascot business/report mode

Mascot Animation

Minimal:

- Waving loop
- Small bounce
- Eye blink
- CTA attention gesture
- Loading state

Animation harus ringan, smooth, dan tidak mengganggu performa.

6. Website Public Page Structure

Homepage

Sections:

1. Header/navigation
2. Hero section with animated mascot
3. Featured menu
4. Menu categories
5. Why Semayot
6. Happy service section
7. Promo/recommendation
8. Location and opening hours
9. WhatsApp order CTA
10. Footer

Menu Page

Features:

- Category filter
- Food cards
- Price
- Food image
- Availability status
- Recommended badge
- WhatsApp order button

Location Page

Features:

- Address
- Google Maps embed/link
- Opening hours
- Contact
- Parking/landmark notes if available

About Page

Features:

- Short story of Semayot
- Service values
- Food specialty
- Clean and friendly positioning

7. Public Website Interaction

Important interactions:

- Food cards hover gently
- CTA button has friendly motion
- Mascot appears in key moments
- Menu filter is fast and smooth
- WhatsApp order is always accessible
- Mobile-first experience must be excellent

8. Admin System Required Modules

Dashboard

Display:

- Today's revenue
- Today's transactions
- Today's expenses
- Estimated profit
- Best-selling items
- Low-performing items
- Daily trend
- Agent summary preview

Product/Menu Management

Capabilities:

- Add product
- Edit product
- Remove/archive product
- Upload product image
- Set category
- Set price
- Set availability
- Set recommended/favorite
- Optional: set cost/HPP

Transactions

Capabilities:

- Add transaction
- Select menu items
- Quantity
- Discount
- Payment method
- Notes
- Auto-calculate total
- Save transaction
- Print/share receipt optional

Income & Expense

Capabilities:

- Income generated automatically from transactions
- Manual income entry if needed
- Add expense
- Expense category
- Expense note
- Expense date
- Attach receipt photo optional

Reports

Capabilities:

- Daily report
- Weekly report
- Monthly report
- Revenue chart

- Expense chart
- Profit estimate
- Best-selling menu
- Export PDF
- Export Excel/CSV

Agent Summary

Capabilities:

- Generate daily summary
- Generate weekly summary
- Generate monthly summary
- Detect unusual expense
- Detect best/worst menu performance
- Recommend stock/promo improvement
- Send report to owner via selected channel

Market Radar

Capabilities:

- Store competitor list
- Record competitor notes
- Compare menu, price, rating, review, and positioning
- Generate improvement suggestions
- No unsafe scraping
- Use official APIs or manual input when needed

9. AI Agent Rules

AI agent is read-only by default.

The agent may:

- Read transaction data
- Read product data
- Read expense data
- Read reports
- Summarize performance
- Detect anomalies
- Suggest improvements
- Draft promo ideas
- Draft market recommendations

The agent may not:

- Delete product

- Change price
- Modify transaction
- Alter financial report
- Send external messages without approval unless scheduled and explicitly configured
- Scrape websites aggressively or illegally
- Invent data when data is missing

If data is incomplete, agent must say the data is incomplete.

10. Technical Direction

Recommended stack:

- Next.js
- TypeScript
- Tailwind CSS
- shadcn/ui
- Framer Motion
- Supabase PostgreSQL
- Supabase Auth
- Supabase Storage
- OpenAI Responses API or Agents SDK
- Vercel deployment
- WhatsApp Cloud API / Telegram / Email for reports

11. Performance Requirements

Public website:

- Mobile-first
- Fast loading
- Image optimized
- Animations lightweight
- Avoid heavy unnecessary libraries
- SEO-ready
- Accessible buttons and readable contrast

Admin system:

- Fast input
- No slow dashboard
- Clear loading states
- Good empty states
- Audit log for important actions

12. Deliverables From Designer

Required:

1. Logo refinement if needed
2. Mascot design
3. Mascot poses
4. Homepage desktop
5. Homepage mobile
6. Menu page desktop/mobile
7. Admin dashboard
8. Product management screen
9. Transaction input screen
10. Report screen
11. Design system tokens
12. Component states
13. Motion direction samples

13. Deliverables From Developer

Required:

1. Next.js project setup
2. Public website pages
3. Admin authentication
4. Product CRUD
5. Transaction module
6. Expense module
7. Reports module
8. Agent summary module
9. Basic market radar
10. Database schema
11. Storage setup
12. Export PDF/CSV
13. Deployment
14. Documentation

14. Definition of Done

Project v1 is done when:

- Public website can be opened on mobile and desktop
- Menu can be managed from admin
- Product image can be uploaded
- Transaction can be recorded
- Expense can be recorded
- Daily/monthly reports can be viewed

- Report can be exported
- Agent can summarize daily performance
- Owner can receive or view summary
- Market radar has basic competitor notes and recommendations
- Website feels cheerful, animated, clean, and Semayot-specific
- No critical admin workflow is broken
