

SEMAYOT WEBSITE + ADMIN SYSTEM PRD v1

1. Product Name

Semayot Control Center

2. Product Summary

Semayot Control Center adalah sistem digital untuk Rumah Makan Semayot yang terdiri dari:

1. Website publik untuk pelanggan
2. Admin system untuk produk, transaksi, pendapatan, pengeluaran, dan laporan
3. AI agent untuk ringkasan otomatis dan rekomendasi bisnis
4. Market radar untuk membantu Semayot terus bersaing

3. Goals

Business Goals

- Membuat Semayot terlihat modern dan mudah diingat
- Mempermudah pelanggan melihat menu dan order
- Membantu owner mengetahui pendapatan dan pengeluaran
- Membuat laporan pembukuan harian dan bulanan otomatis
- Memberi insight bisnis berbasis data
- Membantu Semayot bersaing dengan rumah makan sekitar

User Goals

Pelanggan ingin:

- Melihat menu
- Melihat harga
- Mengetahui lokasi
- Order dengan mudah
- Merasa brand Semayot ramah dan menyenangkan

Owner ingin:

- Tambah/hapus/edit produk
- Catat penjualan
- Catat pengeluaran
- Lihat omzet harian/bulanan
- Tahu menu terlaris
- Tahu apakah bisnis naik/turun
- Mendapat laporan otomatis

- Mendapat rekomendasi improvement

Kasir/admin ingin:

- Input transaksi cepat
- Lihat produk tersedia
- Menghindari input rumit
- Tidak bingung memakai sistem

4. Non-Goals for MVP

MVP tidak perlu langsung mencakup:

- Payment gateway penuh
- Integrasi QRIS otomatis
- Inventory bahan baku detail
- Multi-cabang
- Loyalty point
- Table management kompleks
- Delivery logistics internal
- Accounting standard penuh seperti ERP
- AI yang mengubah data otomatis

Fokus MVP adalah produk, transaksi, pengeluaran, laporan, dan agent summary.

5. User Roles

Owner

Permissions:

- Full access
- Manage products
- Manage expenses
- View all reports
- Generate agent summary
- Manage competitors
- Export reports
- Manage users

Admin/Kasir

Permissions:

- Add transaction
- View product list
- Add basic expense if allowed

- View limited daily summary

Staff

Permissions:

- View menu/products
- Update availability if allowed

AI Agent

Permissions:

- Read-only data access
- Generate summary
- Generate recommendations
- Flag anomalies
- Draft market insight

6. Public Website Requirements

Homepage

Must include:

- Hero section
- Animated mascot
- Main CTA
- Featured menu
- Service value
- Promo/recommendation
- Location
- WhatsApp order

Acceptance criteria:

- User can understand what Semayot sells within 5 seconds
- User can access menu within 1 click
- User can contact/order within 1 click
- Mobile layout is clean and fast

Menu Page

Must include:

- Product image
- Product name
- Price

- Category
- Availability status
- Recommended/favorite label
- WhatsApp order CTA

Acceptance criteria:

- Menu loads fast
- Products can be filtered by category
- Out-of-stock product is clearly marked
- Price is easy to read

Location Section

Must include:

- Address
- Map link/embed
- Opening hours
- Contact button
- Nearby landmark if available

Acceptance criteria:

- User can open Google Maps
- User can contact restaurant
- User can see opening hours clearly

7. Admin System Requirements

Authentication

Features:

- Login
- Logout
- Role-based access
- Protected admin routes

Acceptance criteria:

- Public users cannot access admin
- Owner and staff have different permissions
- Session handling is stable

Product Management

Fields:

- Product name
- Category
- Description
- Price
- Cost/HPP optional
- Image
- Availability status
- Recommended status
- Active/archived status

Features:

- Add product
- Edit product
- Archive product
- Upload image
- Filter/search product
- Change availability

Acceptance criteria:

- Product appears on public menu after activation
- Archived product does not appear publicly
- Price changes are logged
- Image upload works

Transaction Module

Fields:

- Transaction date/time
- Items
- Quantity
- Price
- Discount
- Payment method
- Notes
- Total amount

Features:

- Create transaction
- Add multiple items
- Auto-calculate total

- Save transaction
- View transaction history
- Optional receipt view

Acceptance criteria:

- Transaction automatically contributes to revenue
- Total calculation is correct
- Transaction cannot be saved with zero item
- Transaction history is searchable

Expense Module

Fields:

- Expense date
- Category
- Amount
- Description
- Payment method optional
- Receipt image optional

Features:

- Add expense
- Edit expense with permission
- Delete/archive expense with owner permission
- Filter expense by date/category

Acceptance criteria:

- Expense contributes to profit calculation
- Expense report can be filtered daily/monthly
- Major changes are logged

Dashboard

Must display:

- Revenue today
- Expenses today
- Estimated profit today
- Transaction count
- Average transaction value
- Best-selling menu
- Monthly revenue trend
- Agent summary box

Acceptance criteria:

- Dashboard updates after new transaction
- Numbers are easy to understand
- Empty state is clear when no data exists

Reports

Report types:

- Daily report
- Weekly report
- Monthly report
- Custom date range

Metrics:

- Revenue
- Expenses
- Estimated gross profit
- Transaction count
- Best-selling menu
- Category performance
- Payment method breakdown

Features:

- Export PDF
- Export CSV/Excel
- Print-friendly view

Acceptance criteria:

- Owner can generate daily and monthly report
- Export works
- Report matches transaction and expense data

8. AI Agent Summary Requirements

Daily Summary

Agent should summarize:

- Total revenue
- Total expense
- Estimated profit
- Number of transactions
- Best-selling menu

- Unusual changes
- Practical recommendation for tomorrow

Weekly Summary

Agent should summarize:

- Weekly revenue trend
- Best/worst day
- Menu trend
- Expense pattern
- Recommended action

Monthly Summary

Agent should summarize:

- Monthly performance
- Revenue trend
- Expense trend
- Profit estimate
- Top menu
- Underperforming menu
- Strategic recommendation

Agent Guardrails

Agent must:

- Use real system data
- Mention if data is incomplete
- Avoid inventing numbers
- Avoid making irreversible changes
- Avoid deleting or editing records
- Give practical recommendations only
- Keep summary short and owner-friendly

Example Daily Agent Output

“Omzet hari ini Rp2.450.000 dari 87 transaksi. Pengeluaran tercatat Rp720.000. Estimasi laba bersih Rp1.180.000. Menu terlaris adalah ayam babi panggang, nasi campur, dan es teh. Jam ramai terjadi sekitar makan siang. Rekomendasi besok: tambah stok menu terlaris, buat paket makan siang, dan cek pengeluaran bahan baku karena naik dari rata-rata minggu ini.”

9. Market Radar Requirements

Purpose

Market radar membantu owner memahami kompetitor dan peluang improvement.

Data Sources

MVP can use:

- Manual competitor entry
- Public business information
- Owner observation
- Customer feedback
- Review summary if legally accessible
- Official API if integrated later

Competitor Fields

- Competitor name
- Location
- Food category
- Price range
- Rating/manual score
- Strengths
- Weaknesses
- Notes
- Last checked date

Market Agent Output

Agent should recommend:

- Menu improvement
- Pricing opportunity
- Promo idea
- Photo/content improvement
- Service improvement
- Google profile improvement
- Differentiation strategy

Guardrail

No aggressive scraping. No fake reviews. No manipulation. No invented competitor data.

10. Database Entities

Minimum tables:

- users
- roles
- product_categories
- products
- orders
- order_items
- expenses
- expense_categories
- daily_reports
- monthly_reports
- agent_summaries
- competitors
- market_snapshots
- audit_logs
- settings

11. Audit Log Requirements

Log important actions:

- Product created
- Product updated
- Product archived
- Price changed
- Transaction edited
- Expense edited
- Report generated
- Agent summary generated
- User login/logout if needed

Each log should store:

- User ID
- Action
- Entity
- Entity ID
- Timestamp
- Before/after data if relevant

12. Suggested Tech Stack

Frontend:

- Next.js
- TypeScript
- Tailwind CSS
- shadcn/ui
- Framer Motion

Backend:

- Supabase PostgreSQL
- Supabase Auth
- Supabase Storage
- Supabase Row Level Security

AI:

- OpenAI Responses API for basic summary
- Agents SDK for advanced workflow later
- Scheduled summary via cron

Deployment:

- Vercel
- Supabase
- Optional: WhatsApp Cloud API, Telegram Bot, or Email provider

13. MVP Milestones

Milestone 1: Foundation

- Project setup
- Database schema
- Auth
- Public layout
- Admin layout

Milestone 2: Public Website

- Homepage
- Menu page
- Location/contact
- Mascot integration
- Motion integration
- Mobile responsive

Milestone 3: Admin Core

- Product CRUD
- Product image upload
- Transaction input
- Expense input
- Dashboard

Milestone 4: Reports

- Daily report
- Monthly report
- Export CSV/PDF
- Basic charts

Milestone 5: AI Summary

- Daily summary
- Weekly/monthly summary
- Recommendation engine
- Owner-facing report format

Milestone 6: Market Radar

- Competitor input
- Market snapshot
- Agent recommendation
- Improvement tracker

14. Success Metrics

Public website:

- More WhatsApp clicks
- More menu views
- Better brand recall
- Faster customer decision

Admin system:

- All sales recorded
- Daily reports generated
- Monthly report available
- Owner can understand business health in under 1 minute

Agent:

- Summary generated accurately
- Recommendations are practical

- No hallucinated financial data
- Owner finds daily report useful

15. MVP Definition of Done

MVP is complete when:

1. Website public is live
2. Mascot and motion are implemented
3. Menu can be managed from admin
4. Transactions can be recorded
5. Expenses can be recorded
6. Dashboard shows daily performance
7. Reports can be generated
8. Agent can create daily summary
9. Owner can export reports
10. Market radar basic version exists
11. System is mobile-friendly
12. No broken critical flow exists
